

Update:

These relationships will be part of next release

- **CWE-1262, CWE-1299, CWE-1222 → ChildOf CWE-1220**
 - (access-control group)
- **CWE-1262 ↔ PeerOf ↔ CWE-1299**
- **CWE-1303 ↔ PeerOf / CanAlsoBe ↔ CWE-1421**
 - (avoid mis-selection)
- **CWE-1258 → ChildOf CWE-1272**
- **CWE-1239 → CanAlsoBe (CWE-1272, CWE-1258)**
- **CWE-1431 → ChildOf CWE-325**
- **CWE-1431 ↔ Peer Of CWE-1420**
 - (and possibly CWE-1258 – per Jason Fung)
- CWE entries can have relationship notes that we can use to compare and contrast CWEs. For CWE-1239's CanAlsoBe relationships - and possibly others - relationship notes could be used to clarify so people won't pick the wrong CWE.

Legend

ChildOf	Current CWE is more specific; target CWE is broader.
PeerOf	Similar or related weakness, without a stronger defined relationship.
CanAlsoBe	Current CWE may also be viewed as the target CWE in some contexts.
